COOPER'S HAWK CHV GEWÜRZTRAMINER

TECHNICAL INFORMATION

Country	Canada
Region	Lake Erie North Shore
Producer	Cooper's Hawk Vineyards
Vintage	2017
Composition	100% Gewurztraminer
Alcohol	12.5%
Residual Sugar	26 g/L

WINEMAKER'S NOTES

"The art of gewurztraminer is capturing its small window of opportunity in the vineyard during harvest. Diligent monitoring of its every transformation to becoming a wine is essential in preserving its exotic and aromatic character. We believe we have captured this enticing wine for you to release and experience." - Adam Graham, Winemaker

TASTING NOTES

Pale straw color. Floral aromas of roses, white lilies, melon, and mango. The palate is viscous, silky with tropical notes, lychee and chai spice. Perfect balance of sweetness and acidity.

FOOD PAIRING

Thai food, Indian curries, salty bacon dishes, Hawaiian pizza

VINEYARD

Cooper's Hawk Vineyards is an estate winery located in 70 acres of land within the Lake Erie North Shore viticultural region.

VITICULTURE

Lake Erie North Shore, often abbreviated to LENS, is an appellation at the southern tip of Ontario. Covering Essex County and the Pelee Island appellation, the Designated Viticultural Area (DVA) is largely defined by water, with Lake St Clair to the north, Detroit River to the west and Lake Erie to the south. The water-moderated climate here is well-suited to the production of wines made from Riesling and Vidal, as well as Cabernet Franc and Merlot.

The main maritime influences in Lake Erie North Shore come from Lake Erie, the shallowest of the Great Lakes. The lake effect is more pronounced in these shallow waters, and the lake heats up faster in the warm summers and cools down

quicker in the winter. This has a profound effect on the growing season, which starts and finishes earlier than in other parts of Ontario. Unobstructed winds from the lake during the growing season bring cooling influences, and when combined with the area's high sunshine hours, this makes for a long, slow ripening process that allows for the development of acidity alongside rich varietal character.

Ancient glacial lakes are responsible for a wide range of geological deposits at Lake Erie North Shore. Predominantly sandy loam and heavy clay soils are layered over various gravels and limestone bedrock, providing good drainage for the vineyard sites. Ample precipitation during the growing season makes irrigation largely unnecessary, and lake-effect snow in the winter helps to insulate the dormant vines against freezes. The early onset of winter here due to cooling influences of the lake makes Lake Erie North Shore well-suited to the production of ice wine.

Wine production in Lake Erie North Shore began in the 1860s, when growers established the first vineyards in the southerly sub-region of Pelee Island, and viticultural pursuits spread quickly onto the mainland, before reaching the Niagara Peninsula.

VINIFICATION

This wine is raised 100% in stainless steel tanks.
